

F5-313

F5 - Configuring Enterprise Manager (EM)- V.11

This one-day course provides networking professionals an overview of Enterprise Manager™, the device management solution that makes it easier for network administrators to view, operate, manage, and administer multiple F5 devices. This hands-on course includes lectures, labs, and discussions, and takes students from initial setup and configuration to operating and optimizing an application delivery infrastructure using Enterprise Manager.

Topics covered in this course include:

- Getting Started with Enterprise Manager
- Navigating the Graphical User Interface (GUI)
- Using BIG-IP® iHealth™ to verify and improve system performance
- Simplifying device inventory
- Performing remote software upgrades
- Configuring centralized, automated reporting
- Using Centralized Analytics to analyze performance of web applications
- Collecting statistics about device performance
- Tracking certificate expiration
- Automating centralized backups and archiving
- Speeding and simplifying device configuration

By course completion, the student should be able to set up and use Enterprise Manager to make device management significantly faster and easier.

Audience

This course is intended for network administrators and operators responsible for managing and optimizing networks with multiple F5 devices.

Prerequisites

Students should understand:

- TCP/IP addressing, routing, and internetworking concepts
- Common elements of WAN and LAN environments
- Essentials of BIG-IP device administration

In addition, students should be proficient in:

- Basic computer operation and application skills, including Windows
- Basic Web browser operation
